

HIT THE GROUND RUNNING WHEN YOU HIT THE REAL WORLD WITH SIX SIGMA TRAINING

Dates for Greenbelt Training : November 16-18, 2018. Cost will be \$475 per student: link to register is <https://www.iise.org/SixSigmaGreenBelt/112018/Houston>
Contact csgebara@uh.edu for more information or to register a professional/ alumni for \$795

Learn how to integrate principles of business, statistics and engineering to achieve tangible results in IISE's Six Sigma Green Belt for Process Improvement course. As a Six Sigma Green Belt, you will be equipped to support and champion Six Sigma implementations in any organization.

This introductory course will give you a thorough understanding of Six Sigma and how to eliminate defects through fundamental process knowledge. You'll be able to quantify the critical quality issues in a company and then apply statistics to provide probabilities of success and failure.

- Topics covered in addition to DMAIC and Six Sigma philosophy include basic statistics, statistical process control, process capability, financial implications and root cause analysis.
- IISE instructors have had years of experience applying these methods to real processes ranging from manufacturing to healthcare to financial services to government.
- The course is shorter than many other Green Belt courses because we include only the tools and information necessary for immediate application. Get what you need in three days of classroom training instead of dawdling over an online course for weeks as you try to make time for it.
- At the end of the course, take the IISE Green Belt Exam (included in the course fee). Participants who pass the exam receive IISE's Six Sigma Green Belt Certificate.

Special Pricing For Students!

IISE Training Center Testimonials

The IISE green belt training is much more comprehensive than most, covering practical key concepts and examples of various projects. ... I highly recommend this training."

*Travis Wakefield
Optical Coating Engineer, Thorlabs Inc.*

I honestly feel privileged to have worked with IISE. The professionalism that has been expressed towards me has almost been a sigh of relief when compared to how one is often treated as a student (especially as a student who is a couple years older than the general student body). Also, I wanted to add that having the opportunity to be a student taught by a practicing professional has been a privilege in itself. Lastly, I have found the speed in which everyone at IISE responds to emails and puts thoughts into action somewhat frightening; I am still not sure how you all do it. Thanks a million again; working with IISE has been a great experience!"

*Ted Mullan
Youngstown State University*

The Six Sigma strategy and methodology not only provides me a set of sharp tools at work, which enables me to add more value to my company, it also broadens my career horizon. Because of the certificate, I have already earned more respect from my colleagues! I knew I had made a right choice to pursue this. Again, thank you!"

*Roxanne Tu
Project Manager, Southern
California Edison Company*

I was in the training department for a while, and this is one of the very best I have seen. Thanks to you and your team."

*Tolulope Fasakin
Florida State University student*

My students had multiple options for the green belt training, but they selected IISE because of the credibility of an internationally recognized organization and the fact that IISE will continue to be around to support the participants."

*Steven Butt
Department Head, Western Michigan University*
